

Dear [prospective client],

Thank you for your interest in the Pickled Teeth program. Please feel free to contact me for a quote or to discuss implementation possibilities further.

What I offer is a tried and tested solution to corporate dilemmas. A computer program as well as a psychological program, Pickled Teeth can pick apart any corporate structure. With even the strongest and most established businesses, Pickled Teeth can provide opportunity for takeovers or even just competitive sabotage.

Once launched, Pickled Teeth will get to work corrupting the internal network of the targeted organisation. The damage will be comprehensive, including not only internal files, but also external websites. But unlike your average virus, Pickled Teeth does not simply sabotage technical systems. It implements a sophisticated program of suggestion upon the employees who use those systems. The result is an escalating sense of paranoia and depression which will break apart the cohesion of any social group. It is a social virus as well as a technical one.

As a businessman who puts his money where his mouth is, Pickled Teeth's first outing has been a wholesale destruction of the very company that produced it. Not only does this provide you, the customer, with a display of its potential, but it should also serve to reassure you that Pickled Teeth is untraceable. Those involved in its manufacture will not be returning to normal life, nor will they attempt to contact each other again. The chance of them piecing together what happened to them is insignificant.

By way of a demonstration, visit [www.gyroscopedia.co.uk](http://www.gyroscopedia.co.uk), and take a look at the network of online media of my ex-employees. I believe you will be impressed, and I await your response.

Needless to say, the information in this document is confidential, and my associates will treat any breach of its security with the utmost seriousness.

Yours sincerely,

Leopold Kruger
